Asset Keeper Pro - Dynamic data for maximum flexibility

Wouldn't it be nice if you could enter your data and know that it would never have to be changed?

If your response is the same as mine, "not the real world", then you'll really appreciate some unique features that allows you to quickly change your fixed asset data as your needs change.

Here's a real world example. You've entered 1,000 assets in your Asset Keeper Pro data file before you find out that Asset Keeper Pro can generate a personal property tax return for you. However, since you're in Arizona, you need to assign a code to each of your assets so that they can be grouped properly according to the Arizona personal property tax rules.

The way this is accomplished in Asset Keeper Pro is that you enter a code in one of the eight (8) sort code fields available and this is then used to identify your assets for the Arizona personal property report. The only problem is, because you've already entered 1,000 assets, you will need to edit all 1,000 assets in order to enter this code in a sort code field.

Just to make this interesting, let's assume that it's 4:00 p.m. on a Friday afternoon and the report is due Monday. Sounds like you might be working this weekend editing a whole lot of assets.

Fortunately, Asset Keeper Pro includes features that eliminate the need to edit each and every asset to make this kind of a change. Click on the link below to see how this can be accomplished in a just a few minutes.

Don't be fooled by the fact that the Sample Data File we will use only has 12 assets in it. Even if your file had 2,000, 20,000, or 100,000 assets in it, the time to accomplish this kind of a change only takes seconds not hours or days!
